ASSIGNMENT-2

Course	Web Development Laboratory
Experiment No.	Experiment – 4
Title	Event Management Website using HTML, CSS, JavaScript & Flask
Year / Semester	B.Tech | Semester - IV
Department	Computer Science & Engineering
Faculty Incharge	Miss Mansi Kajal
Student Name	Rashmi Jha
Enrollment No.	2401010166
Section / Batch	2024-2028
Date of Submission	6 th April,2026

Event Management Website

1. AIM

To design and develop a fully functional Event Management Website using HTML, CSS, JavaScript (front-end) and Python Flask (back-end), enabling users to create, browse, register for, and manage

events through a dynamic and responsive web interface.

2. CODE

app.py > ...

C:\Users\jhaki\OneDrive\Desktop\Event Management Website\app.py • 1 problem in this file

```python
app = Flask(__name__)
app.secret_key = "secret123"

# In-memory database
events = [
    {"id": 1, "name": "Tech Conference", "date": "2026-05-10", "venue": "Delhi", "rsvp": 0},
    {"id": 2, "name": "Music Fest", "date": "2026-06-15", "venue": "Mumbai", "rsvp": 0},
    {"id": 3, "name": "Art Workshop", "date": "2026-07-20", "venue": "Bangalore", "rsvp": 0},
]

@app.route("/")
def index():
    return render_template("index.html")

@app.route("/events")
def show_events():
    return render_template("events.html", events=events)

@app.route("/register", methods=["GET", "POST"])
def register():
    if request.method == "POST":
        name = request.form["name"]
        email = request.form["email"]
        phone = request.form["phone"]
        event_id = int(request.form["event"])

        if not name or not email or not phone:
            flash("All fields required!")
            return redirect("/register")

        for event in events:
            if event["id"] == event_id:
                event["rsvp"] += 1

        flash("Registration Successful!")
        return redirect("/events")

    return render_template("register.html", events=events)

@app.route("/admin")
def admin():
    return render_template("admin.html", events=events)

@app.route("/delete/<int:id>")
def delete(id):
    global events
    events = [e for e in events if e["id"] != id]
    return redirect("/admin")

if __name__ == "__main__":
    app.run(debug=True)
```

base.html > html

```html
<!DOCTYPE html>

</tr>
{% endfor %}

</table>
{% endblock %}
```

style.css > .flash

```css
body {
    font-family: Arial;
    margin: 0;
    background: #f5f5f5;
}

nav {
    background: #333;
    color: white;
    padding: 10px;
}

nav a {
    color: white;
    margin: 10px;
    text-decoration: none;
}

.container {
    padding: 20px;
}

.grid {
    display: flex;
    gap: 20px;
}

.card {
    background: white;
    padding: 15px;
    border-radius: 10px;
}

.btn {
    background: blue;
    color: white;
    padding: 10px;
}

.flash {
    color: green;
}
```

script.js > ...

```javascript
document.getElementById("search").addEventListener("keyup", function() {
    let value = this.value.toLowerCase();
    let cards = document.querySelectorAll(".card");

    cards.forEach(card => {
        card.style.display = card.innerText.toLowerCase().includes(value) ? "block" : "none";
    });
});
```
